

Starting:

```
const api = "http://localhost:5000/api/students";

function addstudent() {
    const student = {
        name: name.value,
        email: email.value,
        department: dept.value,
        year: year.value,
        cgpa: cgpa.value
    };

    fetch(api, {
        method: "POST",
        headers: { "Content-Type": "application/json" },
        body: JSON.stringify(student)
    }).then(() => loadStudents());
}

function loadStudents() {
    fetch(api)
        .then(res => res.json())
        .then(data => {
            list.innerHTML = "";
            data.forEach(s => {
                list.innerHTML += `
                    <li>
                        ${s.name} (${s.department})
                        <button onclick="deleteStudent('${s._id}')">Delete</button>
                    </li>`;
            });
        });
}
```

Output:
